New Product Announcement!!!

La Marche is pleased to announce that we have partnered with Maxwell Technologies and is introducing a state of the art charger for the Ultracapacitor module. The La Marche high frequency Ultracap Series charger (USC) along with the Maxwell Ultracapacitor Generating Starting Solutions (GSS) are ideal in starting gensets reliably within seconds.

The La Marche's USC is designed to charge the Ultracapacitor module within minutes and complies with NFPA 110. This dual charging mode charger for Ultracapacitor module and batteries accepts an AC input range of 105V-264V. It has an LCD digital display for output voltage and current, as well as alarm relay contacts for AC Fail, Charger Fail, High and Low DC Voltage. The DC output current limit is adjustable from 50%- 105% and has four LEDs for status indications. This light weight charger is only 6.5lbs and also has an external temperature compensation probe. The USC is designed for easy installation. It is currently available in 12V and 24V models and 10, 20 and 30 amp DC output.

La Marche and Maxwell Technologies have come to the agreement of making La Marche the Master Distributor and the only approved charger for the GSS line starting December 12th, 2016. Both, the USC and the GSS unit, can be sold by La Marche representatives just like any other of our products. This is such a great opportunity for all parties involved.

We will be introducing both the charger and Ultracapacitor module at the PowerGen show next week. Attached are the data sheets, brochures and pricing. La Marche's sales department will be hosting webinars in the near future to go over the product's capabilities and advantages. Please keep an eye out for future emails regarding webinar dates and times, as well as the Maxwell Technologies announcements.

Best regards,
